- B. internal
- C. peripheral
- D. sequential
- E. variable

6. CONGENIAL:

- A. irritable
- B. sterling
- C. clement
- D. feral
- E. courteous

Questions 7-8 are based on the following passage.

Of all organs in the body, perhaps the most mysterious one is the brain. Scientists, physicians, and psychologists have often been at odds about how the brain functions. Still, today we do know that not only is the brain the center of the nervous system, it is considered the seat of one's emotions, memory, and ideas as well.

In the past, it was popular for both doctors and laymen to often talk about the left and right hemispheres of the brain, as if each had very specifically assigned functions. Today, this is not considered nearly as cut and dried as it once was. That is to say, we now know much more than we did a decade ago, and realize that though each area of the brain is associated with certain skills or functions, no one particular area of the brain is thought of as fully responsible for one specific function.

In very loose terminology, the right hemisphere of the brain controls the left side of the body (the arm, leg, hand etcetera); likewise, the left hemisphere controls the right side of the body. In general, it is believed that the left hemisphere primarily controls language learning skills, and the right side controls creative activities. One reason, however, that there is much less emphasis on whether a person is considered to be "right-" or "left-brained" is that there is such an overlap in these areas. For example, a person who is greatly skilled at language learning may also be highly creative or imaginative, or possess musical ability, which is considered to be "right-brained" also.

SAMPLE

Much has been learned about the functioning of the brain through recent medical and scientific research on the subject, and by studying brain-damaged patients. And from these studies, great strides have been made in treating patients with epilepsy, brain tumors, and a host of other brain disorders and diseases. Still, the brain is a great unknown in myriad ways, and remains one of the most challenging and fascinating areas in the medical field.

7. The word "subject" in the passage refers to

- A. a brain-damaged patient
- B. brain functions
- C. treating patients
- D. brain disorders

8. One can infer from the reading that much progress has been made in all of the following EXCEPT

- A. solving the mysteries of the brain
- B. improving the lives of epileptics
- C. advancements in removing brain tumors
- D. treating many neurological disorders

GENERAL KNOWLEDGE

9. Which is the brightest planet in our solar system?

- A. Jupiter**
- B. Venus**
- C. Mars**
- D. Mercury**
